

ELECTRIC VEHICLES FUN TO DRIVE. EASY TO OWN.

Are you ready for an electric vehicle?

Do your homework. Research your options and find the car that has the range you will need for your commute. Then, find out what kind of charger that car needs.

Where will you charge your car? Make sure that your charger's location will be free from obstructions. If you will be traveling outside of your car's normal roundtrip range, plan ahead to see where you can charge along your route.

Check your electrical panel. Ensure you have room on your existing home service to put in a 240v level 2 charging station. Now is a good time to find an electrician that can help you install your charging station.

Contact your utility. Find out if you would benefit from switching to a different rate so you can take advantage of charging during cheaper off peak times of day (nights and weekends) saving you money.

Select a charger. Many companies make electric charging stations. Pick the one that is best for your situation.

Have a qualified electrician install your charger. Depending on your municipality, you may need to get a permit to add a new electrical outlet.

Plug in! Now you have an electric charging station so you can reap the benefits of your emission free vehicle.

Get charged up for our great rebates.

We can help charge your electric vehicle. Our rebates for installing new ENERGY STAR chargers make switching to an electric vehicle easier than ever.

Residential Customers **\$250 rebate for a level 2 charger**

(Maximum of 50% of the installed cost, rebate not to exceed \$250.)

Apply within 60 days of installation
